

ABSTRACT OF DISCLOSURE

Disclosed is a wireless communication method capable of a connectionless broadcast. The wireless communication method has the steps of generating a synchronization information for synchronizing with more than one receiver, and a broadcast data packet containing a broadcast data, broadcasting the synchronization information and synchronizing a channel with the receiver, and transmitting the broadcast data packet to the synchronized receiver. Accordingly, without a waste of time in the connection setup procedure, the broadcast data is promptly transmitted to the receiver.
